

Upgrade your optical comparator with the new Mx200 Geometric Functioning Readout!

Avoid production disruptions from the out-dated QUADRA-CHEK box by upgrading to the Mx200 from MetLogix.

The Mx200 features optical edge and crosshair probes, geometric tolerancing and part programming, large and easy to read data views, and CSV, Standard, or Tolerance reporting. For a limited time, **Productivity Quality, Inc.** will retrofit your optical comparator with an Mx200.
